

# Axicon S-Range Barcode Verifiers

## *More Scans, Greater Accuracy*

ISO/ANSI standards recommend that barcode print quality should be verified throughout the height of the barcode. However, taking multiple scans of each barcode can be time consuming and the reality is that in many cases users compromise accuracy in order to meet the time constraints.

The Axicon S range is a quick and easy to use solution to this problem. Simply place your verifier on your barcode, slide the verifier over the code and receive an instant report on the quality of your barcode with up to 100 scans taken over the entire height of your code.

### **Ideal for verifying small Barcodes**

It has never been easier to verify smaller or truncated barcodes, whether GS1-DataBar (including stacked), small sequential barcodes or other specialist codes. The continuous scan feature on the S range eliminates the need to accurately position your verifier on these codes, increasing efficiency and accuracy at the same time.

### **Benefits**

- ISO/ANSI Verification Standards
- Up to 100 Scans / per Second
- Continuous Scan or Traditional Mode
- AI Data Content Checker
- GS1 Reporting Template
- Automatic Variable Aperture
